

UNREGARDED OF THE TYPE OF CONNECTION, TEESING CAN DEVELOP IT

Teeing air headers are used in the oil, gas, petroleum and many other industries for compact installations.

Our wide assortment of air headers is ideal for applications in different outlet take-offs. Air headers are ideal for replacing valve assemblies that are generally operated from one source. The inlet-connection of our air headers

is of flange or screwable type with a drain-valve at the manifold exit. Along with this, we offer bracket / U clamp for wall mounting of the air headers.

Besides our standard versions Teesing can configure every layout to suit your applications. Here under you see some examples of specials we made in the past years.
